

EC200x&EC600S&EG912Y Series MQTT Application Note

LTE Standard Module Series

Version: 1.0

Date: 2020-08-12

Status: Released

Our aim is to provide customers with timely and comprehensive service. For any assistance, please contact our company headquarters:

Quectel Wireless Solutions Co., Ltd.

Building 5, Shanghai Business Park Phase III (Area B), No.1016 Tianlin Road, Minhang District, Shanghai 200233, China

Tel: +86 21 5108 6236 Email: info@quectel.com

Or our local office. For more information, please visit: http://www.quectel.com/support/sales.htm.

For technical support, or to report documentation errors, please visit:

http://www.quectel.com/support/technical.htm or email to support@quectel.com.

GENERAL NOTES

QUECTEL OFFERS THE INFORMATION AS A SERVICE TO ITS CUSTOMERS. THE INFORMATION PROVIDED IS BASED UPON CUSTOMERS' REQUIREMENTS. QUECTEL MAKES EVERY EFFORT TO ENSURE THE QUALITY OF THE INFORMATION IT MAKES AVAILABLE. QUECTEL DOES NOT MAKE ANY WARRANTY AS TO THE INFORMATION CONTAINED HEREIN, AND DOES NOT ACCEPT ANY LIABILITY FOR ANY INJURY, LOSS OR DAMAGE OF ANY KIND INCURRED BY USE OF OR RELIANCE UPON THE INFORMATION. ALL INFORMATION SUPPLIED HEREIN IS SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

DISCLAIMER

WHILE QUECTEL HAS MADE EFFORTS TO ENSURE THAT THE FUNCTIONS AND FEATURES UNDER DEVELOPMENT ARE FREE FROM ERRORS, IT IS POSSIBLE THAT THESE FUNCTIONS AND FEATURES COULD CONTAIN ERRORS, INACCURACIES AND OMISSIONS. UNLESS OTHERWISE PROVIDED BY VALID AGREEMENT, QUECTEL MAKES NO WARRANTIES OF ANY KIND, IMPLIED OR EXPRESS, WITH RESPECT TO THE USE OF FEATURES AND FUNCTIONS UNDER DEVELOPMENT. TO THE MAXIMUM EXTENT PERMITTED BY LAW, QUECTEL EXCLUDES ALL LIABILITY FOR ANY LOSS OR DAMAGE SUFFERED IN CONNECTION WITH THE USE OF THE FUNCTIONS AND FEATURES UNDER DEVELOPMENT, REGARDLESS OF WHETHER SUCH LOSS OR DAMAGE MAY HAVE BEEN FORESEEABLE.

COPYRIGHT

THE INFORMATION CONTAINED HERE IS PROPRIETARY TECHNICAL INFORMATION OF QUECTEL WIRELESS SOLUTIONS CO., LTD. TRANSMITTING, REPRODUCING, DISSEMINATING AND EDITING THIS DOCUMENT AS WELL AS USING THE CONTENT WITHOUT PERMISSION ARE FORBIDDEN. OFFENDERS WILL BE HELD LIABLE FOR PAYMENT OF DAMAGES. 1 Introduction

MQTT is a broker-based publish/subscribe messaging protocol designed to be open, simple, lightweight and easy to implement. It is designed for connections with remote locations where a "small code footprint" is required or the network bandwidth is limited.

This document introduces how to use the MQTT function of the following Quectel modules through AT commands.

- EC200T series
- EC200S series
- EC600S-CN
- EG912Y Series

2 MQTT Data Interaction

This chapter gives the data interaction mechanism of MQTT function.

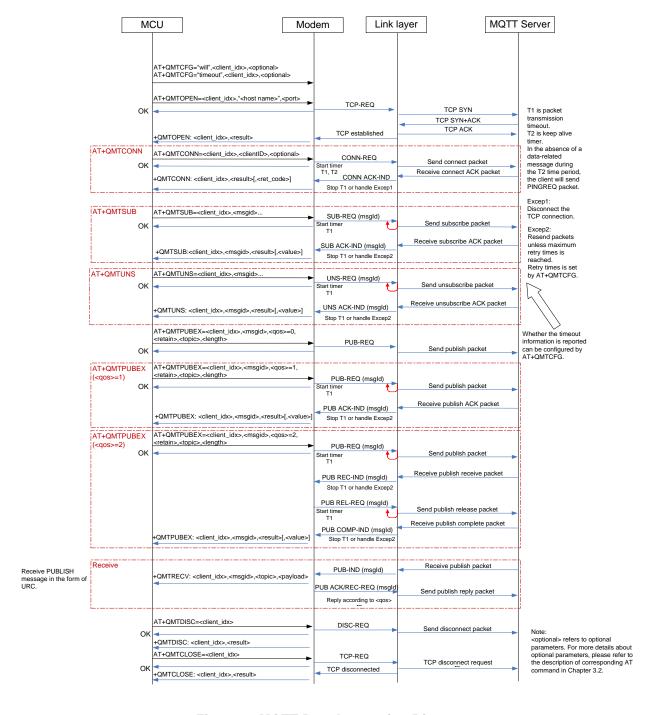

Figure 1: MQTT Data Interaction Diagram

3 MQTT Related AT Commands

This chapter presents the AT commands for operating MQTT function.

3.1. AT Command Syntax

3.1.1. Definitions

<CR> Carriage return character.

<LF> Line feed character.

• <...> Parameter name. Angle brackets do not appear on command line.

[...] Optional parameter of a command or an optional part of TA information response.
 Square brackets do not appear on command line. When an optional parameter is omitted, the new value equals its previous value or its default setting, unless otherwise specified.

<u>Underline</u> Default setting of a parameter.

3.1.2. AT Command Syntax

The AT or at prefix must be added at the beginning of each command line. Entering <CR> will terminate a command line. Commands are usually followed by a response that includes <CR><LF><response><CR><LF>. Throughout this document, only the response <response> is presented, <CR><LF> are omitted intentionally.

Table 1: Types of AT Commands and Responses

Test Command	AT+ <cmd>=?</cmd>	This command returns the list of parameters and value ranges set by the corresponding Write Command or internal processes.
Read Command	AT+ <cmd>?</cmd>	This command returns the currently set value of the parameter or parameters.
Write Command	AT+ <cmd>=<p1> [,<p2>[,<p3>[]]]</p3></p2></p1></cmd>	This command sets the user-definable parameter values.
Execution Command	AT+ <cmd></cmd>	This command reads non-variable parameters affected by internal processes in the module.

3.2. Description of MQTT Related AT Commands

3.2.1. AT+QMTCFG Configure Optional Parameters of MQTT

This command configures optional parameters of MQTT.

AT+QMTCFG Configure Option	al Parameters of MQTT
Test Command	Response
AT+QMTCFG=?	+QMTCFG: "version",(range of supported

dx>[, <view_mode>]</view_mode>	
	OK
	If the optional parameter is specified, and the MQTT connection is not established, configure the MQTT data view mode in transparent mode: OK
	If there is any error: ERROR
Maximum Response Time	300 ms
Characteristic	The command takes effect immediately. The configurations are not saved.

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<vsn></vsn>	Integer type. MQTT protocol version.	
	3 MQTT protocol v3.1	
	4 MQTT protocol v3.1.1	
<cid></cid>	Integer type. The PDP to be used by the MQTT client. Range: 1–15.	
	Default value: 1.	
<will_fg></will_fg>	Integer type. Configure the Will flag.	

	O Ignore the Will flag configuration		
	1 Require the Will flag configuration		
<will_qos></will_qos>	Integer type. Quality of service for message delivery.		
	O At most once		
	1 At least once		
	2 Exactly once		
<will_retain></will_retain>	Integer type. The Will retain flag is only used on PUBLISH messages.		
	When a client sends a PUBLISH message to a server, the server will not hold		
	on to the message after it has been delivered to the current subscribers		
	1 When a client sends a PUBLISH message to a server, the server should hold		
	on to the message after it has been delivered to the current subscribers		
<will_topic></will_topic>	String type. Will topic string. Length: 1–256 bytes.		
<will_msg></will_msg>	String type. The Will message defines the content of the message that is		
	published to the will topic when the client is unexpectedly disconnected.		
	Range: 0–256.		
<will_len></will_len>	Integer type. The length of Will message. Range: 0–256. Unit: byte.		
<pkt_timeout></pkt_timeout>	Integer type. Timeout of the packet delivery. Range: 1-60. Default value: 5.		
	Unit: s.		
<retry_times></retry_times>	Integer type. Retry times when packet delivery times out. Range: 0–10. Default		
	value: 3.		
<timeout_notice></timeout_notice>	Integer type. Whether to report timeout message when transmitting packets.		
	0 Not report		
	1 Report		
<clean_session></clean_session>	Integer type. Configure the session type.		
	The server must store the subscriptions of the client after it disconnects.		
	The server must discard any previously maintained information about the		
	client and treat the connection as "clean".		
<keep_alive_time></keep_alive_time>	Integer type. Keep-alive time. Range: 0-3600. Default value: 120. Unit: s. It		
	defines the maximum time interval between messages received from a client. If		
	the server does not receive a message from the client within 1.5 times the		
	keep-alive time period, it disconnects the client as if the client has sent a		
	DISCONNECT message.		
001	0 The client is not disconnected		
<ssl_enable></ssl_enable>	Integer type. Configure the MQTT SSL mode.		
	Use normal TCP connection for MQTT		
col atv idvo	1 Use SSL TCP secure connection for MQTT		
<ssl_ctx_idx></ssl_ctx_idx>	Integer type. SSL context index. Range: 0–5.		
<msg_recv_mode></msg_recv_mode>	Integer type. Whether the MQTT message receiving mode.		
	 MQTT message received from server is contained in URC. MQTT message received from server is not contained in URC. 		
amed lan anables	1 MQTT message received from server is not contained in URC.		
<msg_len_enable></msg_len_enable>	Integer type. Whether the length of MQTT message received from server is contained in URC.		
	_		
	1 Contained		

<qmtping_interval> Integer type. The heartbeat interval. Range: 5–60. Default value: 5. Unit: s.

<send_mode> Integer type. MQTT message sending mode.

0 String1 Hex

cproduct_id> String type. Product ID issued by OneNET/Huawei IoT platforms.

<access_key> String type. Device access key issued by OneNET/Huawei IoT platform.

<hw_time_enable> Integer type. Enable/disable the check of timestamp when the device is

connected to the Huawei IoT platform.

0 Disable1 Enable

cproduct_secret> String type. Product verification certificate issued by Huawei IoT platform.

<recv_mode> Integer type. MQTT message receiving mode.

0 String1 Hex

<view_mode> Integer type. MQTT data view mode in transparent mode.

The data is not displayed in transparent modeThe data can be displayed in transparent mode

NOTES

- If <will_fg>=1, then <will_qos>, <will_retain>, <will_topic> and <will_msg> must be present.
 Otherwise they are omitted.
- 2. **<clean session>=**0 is only effective when the server supports the operation.
- If MQTT connection is configured to SSL mode, <SSL_ctx_idx> must be specified. Also, you can
 use AT+QSSLCFG to configure the SSL version, cipher suite, secure level, CA certificate, client
 certificate, client key and ignorance of RTC time, which are used in MQTT SSL handshake
 procedure.
- 4. It is crucial to ensure message delivery does not time out while the message is still being sent.
- 5. **AT+QMTCFG="aliauth"** is only used for Alibaba Cloud. If it is configured, **<username>** and **<password>** in **AT+QMTCONN** can be omitted.

3.2.2. AT+QMTOPEN Open a Network for MQTT Client

This command opens a network for MQTT client.

AT+QMTOPEN Open a Networ	Open a Network for MQTT Client	
Test Command	Response	
AT+QMTOPEN=?	+QMTOPEN: (range of supported <cli>client_idx>s),"hostna</cli>	
	me",(range of supported <port>s)</port>	

	ок
Read Command AT+QMTOPEN?	Response [+QMTOPEN: <client_idx>,<host_name>,<port>]</port></host_name></client_idx>
	ок
	If there is any error:
	ERROR
Write Command	Response

ame>, <port></port>	
	+QMTOPEN: <client_idx>,<result></result></client_idx>
	If there is any error:
	ERROR
Maximum Response Time	120 s, determined by network
Characteristic	/

<client_idx></client_idx>	Integer type. MQTT client identifier. Range: 0–5.		
<host_name></host_name>	String type. The address of the server. It could be an IP address or a domain		
	name. The maximum size is 100 bytes.		
<port></port>	Integer type. The port of the server. Range: 1-65535.		
<result></result>	Integer type. Result of the command execution.		
	-1 Failed to open network		
	0 Network opened successfully		
	1 Wrong parameter		
	2 MQTT identifier is occupied		
	3 Failed to activate PDP		
	4 Failed to parse domain name		
	5 Network connection error		

3.2.3. AT+QMTCLOSE Close a Network for MQTT Client

This command closes a network for MQTT client.

AT+QMTCLOSE Close a Networ	k for MQTT Client
Test Command	Response
AT+QMTCLOSE=?	+QMTCLOSE: (range of supported <client_idx>s)</client_idx>

	ок
Write Command	Response
AT+QMTCLOSE= <client_idx></client_idx>	ОК
	+QMTCLOSE: <client_idx>,<result> If there is any error: ERROR</result></client_idx>
Maximum Response Time	30 s
Characteristic	1

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<result></result>	Integer type. Result of the command execution.	
	-1	Failed to close network
	0	Network closed successfully

3.2.4. AT+QMTCONN Connect a Client to MQTT Server

This command connects a client to MQTT server. When a TCP/IP socket connection is established from a client to a server, a protocol level session must be created using a CONNECT flow.

AT+QMTCONN Connect a Client	to MQTT Server
Test Command	Response
AT+QMTCONN=?	+QMTCONN: (range of supported <client_idx>s),"clienti</client_idx>
	d","username","password"
	ок
Read Command	Response
AT+QMTCONN?	[+QMTCONN: <client_idx>,<state>]</state></client_idx>

Write Command	Response
AT+QMTCONN= <client_idx>,<clienti< td=""><td>OK</td></clienti<></client_idx>	OK
D>[, <username>,<password>]</password></username>	
	+QMTCONN: <client_idx>,<result>[,<ret_code>]</ret_code></result></client_idx>

	If there is any error: ERROR
Maximum Response Time	<pkt_timeout> (default 5 s), determined by network</pkt_timeout>
Characteristic	1

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0–5.		
<cli>clientID></cli>	String type. The client identifier string.		
<username></username>	String type. User name of the client. It can be used for authentication.		
<password></password>	String type. Password corresponding to the user name of the client. It can be used		
	for authentication.		
<result></result>	Integer type. Result of the command execution.		
	0 Packet sent successfully and ACK received from server		
	1 Packet retransmission		
	2 Failed to send packet		
<state></state>	Integer type. MQTT connection state.		
	1 MQTT is initializing		
	2 MQTT is connecting		
	3 MQTT is connected		
	4 MQTT is disconnecting		
<ret_code></ret_code>	Integer type. Connection status return code.		
	0 Connection Accepted		
	1 Connection Refused: Unacceptable Protocol Version		
	2 Connection Refused: Identifier Rejected		
	3 Connection Refused: Server Unavailable		
	4 Connection Refused: Bad User Name or Password		
	5 Connection Refused: Not Authorized		
<pkt_timeout></pkt_timeout>	Integer type. Timeout of the packet delivery. Range: 1-60. Default value: 5.		
	Unit: second. The value can be configured by AT+QMTCFG="timeout", <clie< th=""></clie<>		
	nt_idx>[, <pkt_timeout>,<retry_times>,<timeout_notice>].</timeout_notice></retry_times></pkt_timeout>		

NOTE

If a client with the same client ID is already connected to the server, the "older" client must be disconnected by the server before completing the CONNECT flow of the new client.

3.2.5. AT+QMTDISC Disconnect a Client from MQTT Server

This command disconnects a client from MQTT server. A DISCONNECT message is sent from the client to the server to indicate that it is about to close its TCP/IP connection.

AT+QMTDISC Disconnect a Clie	nt from MQTT Server
Test Command	Response
AT+QMTDISC=?	+QMTDISC: (range of supported <client_idx>s)</client_idx>
	ОК
Write Command	Response
AT+QMTDISC= <client_idx></client_idx>	ОК
	+QMTDISC: <client_idx>,<result></result></client_idx>
	If there is any error:
	ERROR
Maximum Response Time	30 s
Characteristic	/

allant lalar	Liver And MOTT Provide Provide A		
<client_idx></client_idx>	Integ	Integer type. MQTT client identifier. Range: 0-5.	
<result></result>	Integer type. Result of the command execution.		
	-1	Failed to close connection	
	0	Connection closed successfully	

3.2.6. AT+QMTSUB Subscribe to Topics

This command subscribes to one or more topics. A SUBSCRIBE message is sent by a client to register an interest in one or more topics with the server. Messages published to these topics are delivered from the server to the client as PUBLISH messages.

AT+QMTSUB Subscribe to Topics	
Test Command AT+QMTSUB=?	Response +QMTSUB: (range of supported <client_idx>s),<msgid>,list of ["topic",qos] OK</msgid></client_idx>
Write Command	Response
AT+QMTSUB= <client_idx>,<msgid></msgid></client_idx>	OK
, <topic1>,<qos1>[,<topic2>,<qos2>]</qos2></topic2></qos1></topic1>	+QMTSUB: <client_idx>,<msgid>,<result>[,<value>] If there is any error:</value></result></msgid></client_idx>

	ERROR
Maximum Response Time	<pre><pkt_timeout> × <retry_times> (default 15 s), determined by network</retry_times></pkt_timeout></pre>
Characteristic	/

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<msgid></msgid>	Integer type. Message identifier of packet. Range: 1-65535.	
<topic></topic>	String type. Topic that the client wants to subscribe to or unsubscribe from.	
<qos></qos>	Integer type. The QoS level at which the client wants to publish the messages.	
	<u>0</u> At most once	
	1 At least once	
	2 Exactly once	
<result></result>	Integer type. Result of the command execution.	
	0 Sent packet successfully and received ACK from server	
	1 Packet retransmission	
	2 Failed to send packet	
<value></value>	Integer type.	
	If <result></result> is 0, it is a vector of granted QoS levels.	
	If <result> is 1, it means the times of packet retransmission.</result>	
	If <result> is 2, it is not presented.</result>	
<pkt_timeout></pkt_timeout>	Integer type. Timeout of the packet delivery. Range: 1-60. Default value: 5.	
	Unit: s. The value can be configured by AT+QMTCFG="timeout", <client_id< td=""></client_id<>	
	x>[, <pkt_timeout>,<retry_times>,<timeout_notice>].</timeout_notice></retry_times></pkt_timeout>	
<retry_times></retry_times>	Integer type. Retry times when packet delivery times out. Range: 0–10. Default value: 3.	
	value. J.	

NOTE

The **<msgid>** is only present in messages where the QoS bits in the fixed header indicate QoS level 1 or 2. It must be unique amongst the set of "inflight" messages in a particular direction of communication. It typically increases by exactly one from one message to the next, but it is not compulsory in practical applications.

3.2.7. AT+QMTUNS Unsubscribe from Topics

This command unsubscribes from one or more topics. An UNSUBSCRIBE message is sent by the client to the server to unsubscribe from named topics.

AT+QMTUNS Unsubscribe from Topics	
Test Command AT+QMTUNS=?	Response +QMTUNS: (range of supported <client_idx>s),<msgid>,list of ["topic"] OK</msgid></client_idx>
Write Command	Response
AT+QMTUNS= <client_idx>,<msgid></msgid></client_idx>	OK
, <topic1>[,<topic2>]</topic2></topic1>	+QMTUNS: <client_idx>,<msgid>,<result>[,<value>]</value></result></msgid></client_idx>
	If there is any error:
	ERROR
Maximum Response Time	<pre><pkt_timeout> x <retry_times> (default 15 s), determined by network</retry_times></pkt_timeout></pre>
Characteristic	

<cli>dient_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<msgid></msgid>	Integer type. Message identifier of packet. Range: 1-65535.	
<topic></topic>	String type. Topic that the client wants to subscribe to or unsubscribe from.	
<result></result>	Integer type. Result of the command execution.	
	O Sent packet successfully and received ACK from server	
	1 Packet retransmission	
	2 Failed to send packet	
<value></value>	Integer type.	
	If <result></result> is 0, it is a vector of granted QoS levels.	
	If <result></result> is 1, it means the times of packet retransmission.	
	If <result></result> is 2, it is not presented.	
<pkt_timeout></pkt_timeout>	Integer type. Timeout of the packet delivery. Range: 1-60. Default value: 5.	
	Unit: second. The value can be configured by AT+QMTCFG="timeout", <clie< th=""></clie<>	
	nt_idx>[, <pkt_timeout>,<retry_times>,<timeout_notice>].</timeout_notice></retry_times></pkt_timeout>	
<retry_times></retry_times>	Integer type. Retry times when packet delivery times out. Range: 0–10. Default	
	value: 3.	

3.2.8. AT+QMTPUBEX Publish Messages

This command publishes messages with fixed length by a client to a server for distribution to interested subscribers. Each PUBLISH message is associated with a topic name. If a client subscribes to one or more topics, any message published to those topics are sent by the server to the client as a PUBLISH

message.

AT+QMTPUBEX Publish Messag	ges
Test Command AT+QMTPUBEX=?	Response +QMTPUBEX: (range of supported <client_idx>s), <msgid>,(range of supported <qos>s),(list of supported <retain>s),"topic","length" OK</retain></qos></msgid></client_idx>
Write Command AT+QMTPUBEX= <client_idx>,<msgi d="">,<qos>,<retain>,<topic>,<length></length></topic></retain></qos></msgi></client_idx>	Response Input the data to be sent. When the actual size of data is greater than <length>, the first <length> byte(s) data is sent out. OK</length></length>
	+QMTPUBEX: <client_idx>,<msgid>,<result>[,<value>] If there is any error: ERROR</value></result></msgid></client_idx>
Maximum Response Time	<pre><pkt_timeout> × <retry_times> (default 15 s), determined by network</retry_times></pkt_timeout></pre>
Characteristic	/

Parameter

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<msgid></msgid>	Integer type. Message identifier of packet. Range: 0-65535. It is 0 only when	
	<qos>=0.</qos>	
<qos></qos>	Integer type. The QoS level at which the client wants to publish the messages.	
	O At most once	
	1 At least once	
	2 Exactly once	
<retain></retain>	Integer type. Whether or not the server will retain the message after it has been	
	delivered to the current subscribers.	
	0 Not retain	
	1 Retain	
<topic></topic>	String type. Topic that needs to be published.	
<length></length>	Integer type. Length of message to be published.	
<result></result>	Integer type. Result of the command execution.	
	0 Packet sent successfully and ACK received from server (message that	
	published when <qos></qos> =0 does not require ACK)	
	1 Packet retransmission	

	2 Failed to send packet
<value></value>	Integer type.
	If <result> is 1, it means the times of packet retransmission.</result>
	If <result> is 0 or 2, it is not presented.</result>
<pkt_timeout></pkt_timeout>	Integer type. Timeout of the packet delivery. Range: 1-60. Default value: 5.
	Unit: second. AT+QMTCFG="timeout", <client_idx>[,<pkt_timeout>,<retry_ti< td=""></retry_ti<></pkt_timeout></client_idx>
	mes>, <timeout_notice>].</timeout_notice>
<retry_times></retry_times>	Integer type, Retry times when packet delivery times out. Range: 0-10. Default
	value: 3.

NOTES

- 1. If this command is executed successfully and **OK** is returned, the client can continue to publish new packet. The maximum quantity of to-be-transmitted packets should not be greater than the inflight window size (5); otherwise, **ERROR** is returned.
- 2. After executing this command, the client is ready to send data, which is sent as payload. The maximum length of the input data is 1500 bytes at a time.
- 3. PUBLISH messages can be sent either from a publisher to the server, or from the server to a subscriber. When a server publishes messages to a subscriber, the following URC is returned to notify the host to read the received data that is reported from MQTT server: +QMTRECV: <cli>client_idx>,<msgid>,<topic>[,<payload_length>],<payload>.

For more details about the URC information, please refer to Chapter 4.2.

3.2.9. AT+QMTRECV Read Messages from Buffers

This command reads the messages from the storage buffer where the messages are stored when they are reported by the server.

AT+QMTRECV Read Messages	Read Messages from Buffers	
Test Command	Response	
AT+QMTRECV=?	ОК	
Read Command	Response	
AT+QMTRECV?	+QMTRECV: <client_idx>,<store_status_0>,<store_statu< td=""></store_statu<></store_status_0></client_idx>	
	s_1>, <store_status_2>,<store_status_3>,<store_status_< td=""></store_status_<></store_status_3></store_status_2>	
	4>	
	ок	
	If there is no MQTT connection:	
	ОК	
Write Command	Response	
AT+QMTRECV= <client_idx>[,<recv_i< td=""><td>[(List of +QMTRECV: <client_idx>,<msgid>,<topic>[,<pa< td=""></pa<></topic></msgid></client_idx></td></recv_i<></client_idx>	[(List of +QMTRECV: <client_idx>,<msgid>,<topic>[,<pa< td=""></pa<></topic></msgid></client_idx>	
d>]	yload_len>], <payload>)]</payload>	

	OK If there is no MQTT connection: ERROR
	LKKOK
Maximum Response Time	/

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.	
<store_status></store_status>	Integer type. Indicate whether there is a message stored in the buffer. A maximum	
	of 5 messages can be stored in the buffer. Therefore, URC reports maximally 5	
	messages simultaneously.	
	0 No message in the buffer	
	1 The buffer stores one or more messages	
<recv_id></recv_id>	Integer type. Indicate the serial number of every message received. Range: 0–4.	
<msgid></msgid>	Integer type. Message identifier of packet. Range: 0-65535. It is equal to 0 only	
	when <qos>=0.</qos>	
<topic></topic>	String type. Topic that needs to be published.	
<payload_len></payload_len>	Integer type. The length of payload.	
<payload></payload>	String type. The payload that relates to the topic name.	

4 MQTT Related URCs

This chapter describes MQTT related URCs.

Table 2: MQTT Related URCs

SN	URC Format	Description
[1]	+QMTSTAT: <client_idx>,<err_code></err_code></client_idx>	When the state of MQTT link layer is changed, the client will close the MQTT connection and report the URC.
[2]	+QMTRECV: <client_idx>,<msgid>,<to pic="">[,<payload_len>],<payload></payload></payload_len></to></msgid></client_idx>	Reported when the client has received the packet data from MQTT server.
[3]	+QMTRECV: <client_idx>,<recv_id></recv_id></client_idx>	Reported when the message received from MQTT server has been stored in buffer.
[4]	+QMTPING: <client_idx>,<result></result></client_idx>	When the state of MQTT link layer is changed, the client will close the MQTT connection and report the URC.

4.1. +QMTSTAT URC to Indicate State Change in MQTT Link Layer

The URC begins with **+QMTSTAT**:. It is reported when there is a change in the state of MQTT link layer.

+QMTSTAT URC to Indicate State Change in MQTT Link Layer	
+QMTSTAT: <client_idx>,<err_code></err_code></client_idx>	When the state of MQTT link layer is changed, the client will close the MQTT connection and report the URC.
	close the MQTT connection and report the OKC.

Parameter

<cli>client_idx></cli>	Integer type. MQTT client identifier.	
<err_code></err_code>	Integer type. Error code. Refer to the table below for details.	

Table 3: Error Codes of the URC

<err_code></err_code>	Description	How to do
1	Connection is closed or reset by a peer end.	Execute AT+QMTOPEN command and reopen MQTT connection.
2	Sending PINGREQ packet timed out or failed.	Deactivate PDP first, and then active PDP and reopen MQTT connection.
3	Sending CONNECT packet timed out or failed.	 Check whether the inputted user name and password are correct. Make sure the client ID is not used. Reopen MQTT connection and try to send CONNECT packet to server again.
4	Receiving CONNACK packet timed out or failed.	 Check whether the inputted user name and password are correct. Make sure the client ID is not used. Reopen MQTT connection and try to send CONNECT packet to server again.
5	The client sends DISCONNECT packet to sever and the server closes MQTT connection.	This is a normal process.
6	The client closes MQTT connection due to packet sending failure all the time.	 Make sure the data is correct. Try to reopen MQTT connection since there may be network congestion or an error.
7	The link is not alive or the server is unavailable.	Make sure the link is alive or the server is available currently.
8	The client closes the MQTT connection.	Try to reconnect.
9 – 255	Reserved for future use.	

4.2. +QMTRECV URC to Notify the Host to Read MQTT Packet Data

The URC begins with **+QMTRECV**:. It is mainly used to notify the host to read the received MQTT packet data that is reported from MQTT server.

+QMTRECV URC to Notify the Host to Read MQTT Packet Data	
+QMTRECV: <client_idx>,<msgid>,<t< th=""><th>Notify the host to read the received data that is reported from</th></t<></msgid></client_idx>	Notify the host to read the received data that is reported from
opic>[, <payload_len>],<payload></payload></payload_len>	MQTT server.
+QMTRECV: <client_idx>,<recv_id> Reported when the message received from MQTT server ha</recv_id></client_idx>	
	been stored in buffer.

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0–5.
<msgid></msgid>	Integer type. The message identifier of packet.
<topic></topic>	String type. The topic received from MQTT server.

<payload_len> Integer type. The length of payload.

<payload> String type. The payload that relates to the topic name.

<recv_id> Integer type. Indicate the serial number of every message received.

Range: 0-4.

4.3. +QMTPING URC to Indicate PING State of Keep-alive in MQTT

The URC begins with **+QMTPING:**. It is reported when server receives no message from the client within 1.5 times the keep-alive time period and it will disconnect the client as if the client has sent a DISCONNECT message.

+ QMTPING URC to Indicate PING State of Keep-alive in MQTT +QMTPING: <client_idx>,<result> When the state of MQTT link layer is changed, the client will

close the MQTT connection and report the URC.

Parameter

<cli>client_idx></cli>	Integer type. MQTT client identifier. Range: 0-5.
<result></result>	Integer type. Result of PING state.
	1 Failed

5 Examples

This chapter gives the examples to explain how to use MQTT related AT commands.

5.1. Example of MQTT Operation Without SSL

```
//Configure receiving mode.
AT+QMTCFG="recv/mode",0,0,1
OK
//Configure Alibaba device information for Alibaba cloud.
AT+QMTCFG="aliauth",0,"oyjtmPl5a5j","MQTT_TEST","wN9Y6pZSIIy7Exa5qVzcmigEGO4kAazZ"
OK
AT+QMTOPEN=?
+QMTOPEN: (0-5), "hostname", (1-65535)
OK
//Open a network for MQTT client.
AT+QMTOPEN=0,"iot-as-mqtt.cn-shanghai.aliyuncs.com",1883
OK
+QMTOPEN: 0,0
                           //Opened the MQTT client network successfully.
AT+QMTOPEN?
+QMTOPEN: 0,"iot-as-mqtt.cn-shanghai.aliyuncs.com",1883
OK
AT+QMTCONN=?
+QMTCONN: (0-5), "clientid", "username", "password"
OK
//Connect a client to MQTT server.
//If Alibaba Cloud is connected, customers can use AT+QMTCFG="aliauth" command to configure the
device information in advance, and do not need to provide username/password here anymore.
AT+QMTCONN=0,"clientExample"
OK
+QMTCONN: 0,0,0
                           //Connected the client to MQTT server successfully.
```

```
AT+QMTSUB=?
+QMTSUB: (0-5), <msgid>,list of ["topic",qos]
OK
//Subscribe to topics.
AT+QMTSUB=0,1,"topic/example",2
OK
+QMTSUB: 0,1,0,2
AT+QMTSUB=0,1,"topic/pub",0
OK
+QMTSUB: 0,1,0,0
//If a client subscribes to a topic and other devices publish the same topic to the server, the module will
report the following information.
+QMTRECV: 0,0,"topic/example",36,"This is the payload related to topic"
//Unsubscribe from topics.
AT+QMTUNS=0,2,"topic/example"
OK
+QMTUNS: 0,2,0
AT+QMTPUBEX=?
+QMTPUBEX: (0-5),<msgid>,(0-2),(0,1),"topic","length"
OK
//Publish messages. After receiving >, input data "This is test data, hello MQTT." and then send it. The
maximum length of the data is 1500 bytes and the data that beyond 1500 bytes is omitted.
AT+QMTPUBEX=0,0,0,0,"topic/pub",30
> This is test data, hello MQTT.
OK
+QMTPUBEX: 0,0,0
//If a client subscribes to a topic named "topic/pub" and other devices publish the same topic to the server,
the module reports the following information.
+QMTRECV: 0,0,"topic/pub",30,"This is test data, hello MQTT."
//Disconnect a client from MQTT server.
```

AT+QMTDISC=0

OK

+QMTDISC: 0,0 //Connection closed successfully.

5.2. Example of MQTT Operation with SSL

```
//Configure receiving mode.
AT+QMTCFG="recv/mode",0,0,1
OK
//Configure MQTT session into SSL mode.
AT+QMTCFG="SSL",0,1,2
OK
//If SSL authentication mode is "server authentication", store CA certificate to UFS.
AT+QFUPL="UFS:cacert.pem",1758,100
CONNECT
<Input the cacert.pem data, the size is 1758 bytes>
+QFUPL: 1758,384a
OK
//If SSL authentication mode is "server authentication", store CC certificate to UFS.
AT+QFUPL="UFS:client.pem",1220,100
CONNECT
<Input the client.pem data, the size is 1220 bytes>
+QFUPL: 1220,2d53
OK
//If SSL authentication mode is "server authentication", store CK certificate to UFS.
AT+QFUPL="UFS:user_key.pem",1679,100
<Input the user_key.pem data, the size is 1679 bytes>
+QFUPL: 1679,335f
OK
//Configure CA certificate.
AT+QSSLCFG="cacert",2,"UFS:cacert.pem"
OK
//Configure CC certificate.
AT+QSSLCFG="clientcert",2,"UFS:client.pem"
OK
```

```
//Configure CK certificate.
AT+QSSLCFG="clientkey",2,"UFS:user_key.pem"
OK
//Configure SSL parameters.
AT+QSSLCFG="seclevel",2,2
                                       //SSL authentication mode: server authentication
OK
AT+QSSLCFG="sslversion",2,4
                                       //SSL authentication version
AT+QSSLCFG="ciphersuite",2,"0xFFFF" //Cipher suite
AT+QSSLCFG="ignorelocaltime",2,1
                                       //Ignore the time of authentication.
OK
//Start MQTT SSL connection
AT+QMTOPEN=0,"a1zgnxur10j8ux.iot.us-east-1.amazonaws.com",8883
OK
+QMTOPEN: 0,0
//Connect to MQTT server.
AT+QMTCONN=0,"M26_0206"
OK
+QMTCONN: 0,0,0
//Subscribe to topics.
AT+QMTSUB=0,1,"$aws/things/M26_0206/shadow/update/accepted",1
OK
+QMTSUB: 0,1,0,1
//Publish messages.
AT+QMTPUBEX=0,1,1,0,"$aws/things/M26_0206/shadow/update/accepted",32
>This is publish data from client
OK
+QMTPUBEX: 0,1,0
//If a client subscribes to a topic named "$aws/things/M26_0206/shadow/update/accepted" and other
devices publish the same topic to the server, the module will report the following information.
+QMTRECV: 0,1,"$aws/things/M26_0206/shadow/update/accepted",32,"This is publish data from
client"
```

//Disconnect a client from MQTT server.

AT+QMTDISC=0

OK

+QMTDISC: 0,0
